

Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology

By Michael Keidar, Isak Beilis

Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology By Michael Keidar, Isak Beilis

Plasma Engineering is the first textbook that addresses plasma engineering in the aerospace, nanotechnology, and bioengineering fields from a unified standpoint. It covers the fundamentals of plasma physics at a level suitable for an upper level undergraduate or graduate student, and applies the unique properties of plasmas (ionized gases) to improve processes and performance over a wide variety of areas such as materials processing, spacecraft propulsion, and nanofabrication.

The book starts by reviewing plasma particle collisions, waves, and instabilities, and proceeds to diagnostic tools, such as planar, spherical, and emissive probes, and the electrostatic analyzer, interferometric technique, and plasma spectroscopy. The physics of different types of electrical discharges are considered, including the classical Townsend mechanism of gas electrical breakdown and the Paschen law. Basic approaches and theoretical methodologies for plasma modeling are described, based on the fluid description of plasma solving numerically magnetohydrodynamic (MHD) equations and the kinetic model particle techniques that take into account kinetic interactions among particles and electromagnetic fields. Readers are then introduced to the widest variety of applications in any text on the market, including space propulsion applications and application of low-temperature plasmas in nanoscience and nanotechnology. The latest original results on cold atmospheric plasma (CAP) applications in medicine are presented. The book includes a large number of worked examples, end of chapter exercises, and historical perspectives. There is also an accompanying plasma simulation software covering the Particle in Cell (PIC) approach, available at <http://www.particleincell.com/blog/2011/particle-in-cell-example/>.

This book is appropriate for grad level courses in Plasma Engineering/Plasma Physics in departments of Aerospace Engineering, Electrical Engineering, and Physics. It will also be useful as an introduction to plasma engineering and its applications for early career researchers and practicing engineers.

- The first textbook that addresses plasma engineering in the aerospace, nanotechnology, and bioengineering fields from a unified standpoint
- Includes a large number of worked examples, end of chapter exercises, and historical perspectives

- Accompanying plasma simulation software covering the Particle in Cell (PIC) approach, available at <http://www.particleincell.com/blog/2011/particle-in-cell-example/>

Editorial Review

Review

"This is a very well written, accessible book on a usually very mathematically intensive subject...The text could be used for a graduate class in physics or material science...Professionals working in related plasma science fields would also find this book useful as an up-to-date source on the latest developments in plasma arc theory and related applications."--IEEE Electrical Insulation Magazine, May/June 2014

From the Back Cover

- This is the first textbook that addresses plasma engineering in the aerospace, nanotechnology, and bioengineering fields from a unified stand point.
- It includes a large number of worked examples, end of chapter exercises, and historical perspectives.
- Accompanying the text is plasma simulation software covering the Particle in Cell (PIC) approach.

Plasma Engineering is a textbook which covers the fundamentals of plasma physics at a level suitable for students using application examples. It contains the widest variety of applications of any text on the market, spanning the areas of aerospace engineering, nanotechnology, and nano-bioengineering.

This is a highly practically useful text for courses on Plasma Engineering or Plasma Physics in departments of Aerospace Engineering, Electrical Engineering, and Physics. It is also useful as an introduction to plasma engineering and its applications for early career researchers and practicing engineers.

About the Authors;

Michael Keidar is an Associate Professor in the Department of Mechanical and Aerospace Engineering at The George Washington University. He is Director of George Washington Institute for Nanotechnology. He is a Senior Member of The Institute of Electrical and Electronic Engineers (IEEE), and an Associate Fellow of the American Institute of Aeronautics and Astronautics (AIAA), member of the American Physical Society (APS) and a founding member of the International Society of Plasma Medicine (ISPM), and a member of AIAA Electric Propulsion Technical Committee (EP). The Micropropulsion and Nanotechnology Laboratory (MpNL), was founded and directed by him. His research interest include plasma propulsion, plasma-based nanotechnology and medicine. He has authored over 130 journal papers, book chapter and 5 patents.

Isak Beilis is a Professor of the Faculty of Engineering at Tel Aviv University. He is a Senior Member of The Institute of Electrical and Electronic Engineers (IEEE), Member of Israel Plasma Sciences and Technology Association, Member of Israel Physical Society. Guest Editor of Special Issue of IEEE TRANSACTIONS ON PLASMA SCIENCE. His research interests include physical phenomena in high current electrical discharges, at the electrode surface and in the near electrode plasma, vacuum arc film deposition, ablation phenomena at solid-plasma interface, laser matter interaction. He has authored 170 journal articles, 12 book chapters, 2 patents and co-author of 2 books.

About the Author

Associate Professor, Department of Mechanical and Aerospace Engineering

The George Washington University

Research Activities: Advanced spacecraft propulsion, plasma medicine, bioengineering, plasma-based nanotechnology.

Teaching: thermodynamics, heat transfer, propulsion, plasma engineering

Awards:

2009 Outstanding SEAS Young Researcher Award

2008 elected Associate Fellow, AIAA

2006 Research Faculty Recognition Award by University of Michigan

Professional Memberships:

The Institute of Electrical and Electronic Engineers (IEEE), Senior Member

American Institute of Aeronautics and Astronautics (AIAA), Associate Fellow

American Physical Society (APS), Member

International Society of Plasma Medicine (ISPM), Founding Member

Member of AIAA Electric Propulsion Technical Committee (EP)

Founder and Director, Micropropulsion and Nanotechnology Laboratory (MpNL)

Steering Committee, Plasma Nanoscience Symposium (iPlasmaNanoSym)

Steering Committee, GW Institute for Biomedical Engineering (IBE)

Editorial Board: International Journal of Plasma Science and Engineering

Faculty of Engineering

Tel Aviv University

RESEARCH INTERESTS

Physical phenomena in high current electrical discharges, at the electrode surface and in the near electrode plasma

author of over 150 journal articles, 12 book chapters, and 2 patents

Users Review

From reader reviews:

Jaime Leflore:

What do you consider book? It is just for students since they are still students or this for all people in the world, the actual best subject for that? Only you can be answered for that issue above. Every person has various personality and hobby per other. Don't to be forced someone or something that they don't want do that. You must know how great and important the book Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology. All type of book are you able to see on many resources. You can look for the internet methods or other social media.

Gene Conley:

You could spend your free time to read this book this reserve. This Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology is simple to create you can read it in the park your car, in the beach, train and also soon. If you did not have much space to bring the actual printed book, you can buy the actual e-book. It is make you easier to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when you buy this book.

Brian Scheele:

Many people spending their time period by playing outside with friends, fun activity using family or just watching TV the entire day. You can have new activity to enjoy your whole day by reading a book. Ugh, you think reading a book can actually hard because you have to take the book everywhere? It ok you can have the e-book, delivering everywhere you want in your Touch screen phone. Like Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology which is obtaining the e-book version. So , try out this book? Let's view.

Gloria Quinones:

As we know that book is very important thing to add our information for everything. By a e-book we can know everything we would like. A book is a list of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This book Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology was filled concerning science. Spend your spare time to add your knowledge about your science competence. Some people has different feel when they reading a book. If you know how big selling point of a book, you can really feel enjoy to read a book. In the modern era like now, many ways to get book that you just wanted.
