Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition)

By Chris Aldrich, Lidia Auret

Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition)
By Chris Aldrich, Lidia Auret

This unique text/reference describes in detail the latest advances in unsupervised process monitoring and fault diagnosis with machine learning methods. Abundant case studies throughout the text demonstrate the efficacy of each method in real-world settings. The broad coverage examines such cutting-edge topics as the use of information theory to enhance unsupervised learning in tree-based methods, the extension of kernel methods to multiple kernel learning for feature extraction from data, and the incremental training of multilayer perceptrons to construct deep architectures for enhanced data projections. Topics and features: discusses machine learning frameworks based on artificial neural networks, statistical learning theory and kernel-based methods, and tree-based methods; examines the application of machine learning to steady state and dynamic operations, with a focus on unsupervised learning; describes the use of spectral methods in process fault diagnosis.

Editorial Review

Review

From the reviews:

"The text elaborates a range of classifiers used for supervised and unsupervised machine learning methods, for different types of processes. … The rich examples of various industrial processes and the illustration of subsequent simulation results qualify the work as a reference textbook for graduate studies in machine learning." (C. K. Raju, Computing Reviews, October, 2013)

From the Back Cover

Algorithms for intelligent fault diagnosis of automated operations offer significant benefits to the manufacturing and process industries. Furthermore, machine learning methods enable such monitoring systems to handle nonlinearities and large volumes of data.

This unique text/reference describes in detail the latest advances in *Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods*. Abundant case studies throughout the text demonstrate the efficacy of each method in real-world settings. The broad coverage examines such cutting-edge topics as the use of information theory to enhance unsupervised learning in tree-based methods, the extension of kernel methods to multiple kernel learning for feature extraction from data, and the incremental training of multilayer perceptrons to construct deep architectures for enhanced data projections.

Topics and features:

- Reviews the application of machine learning to process monitoring and fault diagnosis
- Discusses machine learning frameworks based on artificial neural networks, statistical learning theory and kernel-based methods, and tree-based methods
- Examines the application of machine learning to steady state and dynamic operations, with a focus on unsupervised learning
- Describes the use of spectral methods in process fault diagnosis

This highly practical and clearly-structured work is an invaluable resource for all researchers and practitioners involved in process control, multivariate statistics and machine learning.

Dr. Chris Aldrich is a Professor in the Department of Metallurgical and Minerals Engineering at Curtin University, Perth, Australia. **Dr. Lidia Auret** is a Lecturer in the Department of Process Engineering at Stellenbosch University, South Africa.

Users Review

From reader reviews:

Maria Scully:

Have you spare time for any day? What do you do when you have considerably more or little spare time? Yeah, you can choose the suitable activity intended for spend your time. Any person spent their own spare time to take a wander, shopping, or went to the Mall. How about open or maybe read a book eligible Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition)? Maybe it is for being best activity for you. You understand beside you can spend your time using your favorite's book, you can more intelligent than before. Do you agree with its opinion or you have additional opinion?

Warren Zeigler:

Reading a book can be one of a lot of pastime that everyone in the world loves. Do you like reading book and so. There are a lot of reasons why people enjoyed. First reading a e-book will give you a lot of new details. When you read a e-book you will get new information simply because book is one of a number of ways to share the information as well as their idea. Second, examining a book will make an individual more imaginative. When you studying a book especially fictional works book the author will bring someone to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to other folks. When you read this Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition), you may tells your family, friends in addition to soon about yours guide. Your knowledge can inspire others, make them reading a guide.

Jacob Gray:

Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition) can be one of your beginning books that are good idea. Most of us recommend that straight away because this publication has good vocabulary which could increase your knowledge in vocab, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort to place every word into joy arrangement in writing Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition) however doesn't forget the main place, giving the reader the hottest as well as based confirm resource information that maybe you can be considered one of it. This great information could drawn you into brand new stage of crucial thinking.

Alice Hille:

Book is one of source of understanding. We can add our knowledge from it. Not only for students and also native or citizen need book to know the change information of year to help year. As we know those textbooks have many advantages. Beside we all add our knowledge, can also bring us to around the world. From the book Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition) we can consider more advantage. Don't someone to be creative people? To get creative person must want to read a book. Simply choose the best book that acceptable with your aim. Don't end up being doubt to change your life with that book Unsupervised Process Monitoring and Fault Diagnosis with Machine Learning Methods (Advances in Computer Vision and Pattern Recognition). You can more desirable than now.
