

Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

By Guojun Gan

Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) By Guojun Gan

Data clustering is a highly interdisciplinary field, the goal of which is to divide a set of objects into homogeneous groups such that objects in the same group are similar and objects in different groups are quite distinct. Thousands of theoretical papers and a number of books on data clustering have been published over the past 50 years. However, few books exist to teach people how to implement data clustering algorithms. This book was written for anyone who wants to implement or improve their data clustering algorithms.

Using object-oriented design and programming techniques, **Data Clustering in C++** exploits the commonalities of all data clustering algorithms to create a flexible set of reusable classes that simplifies the implementation of any data clustering algorithm. Readers can follow the development of the base data clustering classes and several popular data clustering algorithms. Additional topics such as data pre-processing, data visualization, cluster visualization, and cluster interpretation are briefly covered.

This book is divided into three parts--

- *Data Clustering and C++ Preliminaries*: A review of basic concepts of data clustering, the unified modeling language, object-oriented programming in C++, and design patterns
- *A C++ Data Clustering Framework*: The development of data clustering base classes
- *Data Clustering Algorithms*: The implementation of several popular data clustering algorithms

A key to learning a clustering algorithm is to implement and experiment the clustering algorithm. Complete listings of classes, examples, unit test cases, and GNU configuration files are included in the appendices of this book as well as in the CD-ROM of the book. The only requirements to compile the code are a modern C++ compiler and the Boost C++ libraries.

Users Review

From reader reviews:

Clayton Medina:

Here thing why that Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) are different and trustworthy to be yours. First of all looking at a book is good but it depends in the content than it which is the content is as tasty as food or not. Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) giving you information deeper and different ways, you can find any guide out there but there is no reserve that similar with Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series). It gives you thrill reading through journey, its open up your personal eyes about the thing this happened in the world which is perhaps can be happened around you. You can easily bring everywhere like in park, café, or even in your method home by train. In case you are having difficulties in bringing the paper book maybe the form of Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) in e-book can be your substitute.

Charles Denzer:

Nowadays reading books become more than want or need but also work as a life style. This reading practice give you lot of advantages. Advantages you got of course the knowledge even the information inside the book that will improve your knowledge and information. The details you get based on what kind of book you read, if you want send more knowledge just go with education and learning books but if you want feel happy read one using theme for entertaining including comic or novel. The Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) is kind of e-book which is giving the reader capricious experience.

Michelle Huffman:

Spent a free time for you to be fun activity to do! A lot of people spent their down time with their family, or their very own friends. Usually they undertaking activity like watching television, likely to beach, or picnic from the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your personal free time/ holiday? Could be reading a book can be option to fill your no cost time/ holiday. The first thing you will ask may be what kinds of guide that you should read. If you want to try out

look for book, may be the guide untitled Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) can be excellent book to read. May be it can be best activity to you.

Kenneth Flowers:

As we know that book is very important thing to add our understanding for everything. By a reserve we can know everything we want. A book is a set of written, printed, illustrated or even blank sheet. Every year seemed to be exactly added. This e-book Data Clustering in C++: An Object-Oriented Approach (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) was filled regarding science. Spend your extra time to add your knowledge about your scientific research competence. Some people has several feel when they reading some sort of book. If you know how big good thing about a book, you can really feel enjoy to read a guide. In the modern era like right now, many ways to get book that you just wanted.
