

Gravitation and Spacetime

By Hans C. Ohanian, Remo Ruffini

Gravitation and Spacetime By Hans C. Ohanian, Remo Ruffini

The third edition of this classic textbook is a quantitative introduction for advanced undergraduates and graduate students. It gently guides students from Newton's gravitational theory to special relativity, and then to the relativistic theory of gravitation. General relativity is approached from several perspectives: as a theory constructed by analogy with Maxwell's electrodynamics, as a relativistic generalization of Newton's theory, and as a theory of curved spacetime. The authors provide a concise overview of the important concepts and formulas, coupled with the experimental results underpinning the latest research in the field. Numerous exercises in Newtonian gravitational theory and Maxwell's equations help students master essential concepts for advanced work in general relativity, while detailed spacetime diagrams encourage them to think in terms of four-dimensional geometry. Featuring comprehensive reviews of recent experimental and observational data, the text concludes with chapters on cosmology and the physics of the Big Bang and inflation.

Editorial Review

Review

"A most welcome updated third edition of this splendid textbook on gravitation and spacetime, which provides an excellent introduction to the mathematical and physical foundations underlying our current understanding of the physics and astrophysics of neutron stars, black holes, and gamma ray bursts."

Riccardo Giacconi, Nobel Laureate and University Professor, Johns Hopkins University

"This is by far the best grad level text in gravitational physics. It starts by showing that the natural Lorentz invariant generalization of Newton's scalar potential is a tensor, a perturbation of the usual Lorentz metric. The equivalence principle is then used to derive the full equations of GR. The last half of the book gives a beautiful treatment of black holes and the current model of Big Bang cosmology."

Roy P. Kerr, Prof. Emeritus, University of Canterbury, Christchurch, New Zealand

"The third edition of this wonderful book combines even more perfectly than the previous editions the beauty of Einstein's General Relativity with the physics of stars, galaxies, and the cosmos. It manages to do this in only 500 pages in a pedagogical masterpiece that should be a must for any graduate student in theoretical physics."

Hagen Kleinert, Professor of Physics, Freie Universität Berlin, Germany, and ICRA Net Pescara, Italy, and Nice, France

"The best book on the market today of 500 pages or less on gravitation and general relativity."

John Wheeler, Princeton University [commenting on the first edition]

"I wish I had owned this book when I was trying to teach myself General Relativity for the first time."

The Observatory

About the Author

Hans C. Ohanian received his BS from the University of California, Berkeley, and his PhD from Princeton University, where he worked with John A. Wheeler. He has taught at Rensselaer Polytechnic Institute, the University of Vermont, and in summer courses at UNED in Spain. He has published several textbooks in addition to Gravity and Spacetime, including Classical Electrodynamics and Principles of Quantum Mechanics, as well as articles on various aspects of relativity and quantum theory.

Remo Ruffini is the Chair of Theoretical Physics at the University of Rome, where he received his PhD, and has also taught at Princeton University. He is an editor of the International Journal of Modern Physics and has acted as an advisor to NASA and the Italian Space Agency. In addition to Gravitation and Spacetime, his published works include Cosmology from Space Platforms, Black Holes, Gravitational Waves and Cosmology, Basic Concepts in Relativistic Astrophysics, Gamow Cosmology and various articles and edited volumes.

Users Review

From reader reviews:

Betty Ahlstrom:

Do you one of people who can't read pleasurable if the sentence chained inside the straightway, hold on guys this particular aren't like that. This Gravitation and Spacetime book is readable simply by you who hate the straight word style. You will find the information here are arrange for enjoyable reading experience without leaving possibly decrease the knowledge that want to offer to you. The writer of Gravitation and Spacetime content conveys objective easily to understand by lots of people. The printed and e-book are not different in the articles but it just different such as it. So , do you continue to thinking Gravitation and Spacetime is not loveable to be your top listing reading book?

Louise Rosenbaum:

Hey guys, do you wants to finds a new book to read? May be the book with the subject Gravitation and Spacetime suitable to you? Often the book was written by famous writer in this era. The actual book untitled Gravitation and Spacetime is the main one of several books which everyone read now. This kind of book was inspired a number of people in the world. When you read this book you will enter the new way of measuring that you ever know ahead of. The author explained their idea in the simple way, so all of people can easily to be aware of the core of this book. This book will give you a lot of information about this world now. In order to see the represented of the world on this book.

Christopher Watson:

Is it an individual who having spare time subsequently spend it whole day simply by watching television programs or just resting on the bed? Do you need something new? This Gravitation and Spacetime can be the answer, oh how comes? It's a book you know. You are so out of date, spending your spare time by reading in this new era is common not a geek activity. So what these publications have than the others?

Keith Dunn:

A lot of e-book has printed but it differs from the others. You can get it by web on social media. You can choose the very best book for you, science, amusing, novel, or whatever simply by searching from it. It is called of book Gravitation and Spacetime. Contain your knowledge by it. Without making the printed book, it might add your knowledge and make you happier to read. It is most critical that, you must aware about guide. It can bring you from one destination to other place.
